

All of Us Research Program Programmatic Update; a Glimpse of Mental Health Data in All of Us

Dr. Holly Garriock
Acting Director, Division of Scientific Programs
All of Us Research Program, NIH

National Institutes
of Health

October 5, 2020

NIMH Joint Alliance-Coalition for Research Progress Town Hall

Goals

- In the next 10 minutes I will share with you:
 - Brief Updates from the *All of Us* Research Program
 - Enrollment updates
 - COVID-19 priority areas
 - Overview of the COVID-19 Participant Survey (COPE)
 - Preliminary peeks at mental health data available in the *All of Us* dataset
 - Future plans for Mental Health Campaign

Enrollment Highlights

More than **357,000** participants have enrolled in the program, including more than **271,000** who have provided physical measurements and biospecimens.

**Numbers as of September 10, 2020*

100+ Funded Partner Organizations

320+ Sites Collecting Samples and Measurements

50%+ Racial and Ethnic Minorities

80%+ Underrepresented in Biomedical Research

228,000+ Electronic Health Records

277,000+ Biosamples

All of Us Response to COVID-19

- *All of Us* COVID-related activities:
 - **Digital enrollment and retention (in-person visits paused March 16 through July 13)**
 - **Self-report data through surveys (COPE Survey)**
 - Participant serum sample antibody testing (10k)
 - Standardize EHR information on COVID-19 symptoms, associated health problems, and the effects of different medicines and treatments. Over 4,000 participants who have shared their EHR have been tested for COVID-19.
 - *All of Us* is exploring a collaboration with Accelerate COVID-19 Therapeutic Interventions and Vaccines (ACTIV). ACTIV is a public-private partnership to develop a coordinated research strategy for prioritizing and speeding developments of the most promising treatments and vaccines.

All of Us publicly announced its activities surrounding COVID-19 on June 16.

(Digital) Enrollment and Retention

Digital retention spiked as enrollment dropped. COPE survey showed significant spikes.

Types of Mental Health Data available in the *All of Us* Dataset

NOW

1. EHR

- a. Conditions
- b. Drug Exposures
- c. Procedures (e.g. screening)

1. Survey Questions

- a. Personal Medical History
- b. Family Medical History
- c. COPE: anxiety, depression, suicide

Diversity of EHR entries for 'schizophrenia'; <https://databrowser.researchallofus.org/>

COPE Survey Overview: May, June, July

◎ Mental health and well-being

- optimism
- general well-being
- generalized anxiety (GAD7)
- depression and suicidal ideation (PHQ9)
- perceived stress
- posttraumatic stress symptoms
- physical activity

◎ Social information

- social support
- loneliness
- resilience

◎ COVID-19 specific

- impact on work/childcare from COVID-19
- COVID specific symptoms and testing
- social distancing compliance
- impact of COVID-19
- coping with social isolation

◎ Basic information

- current employment
- health insurance coverage and selection

◎ Substance use

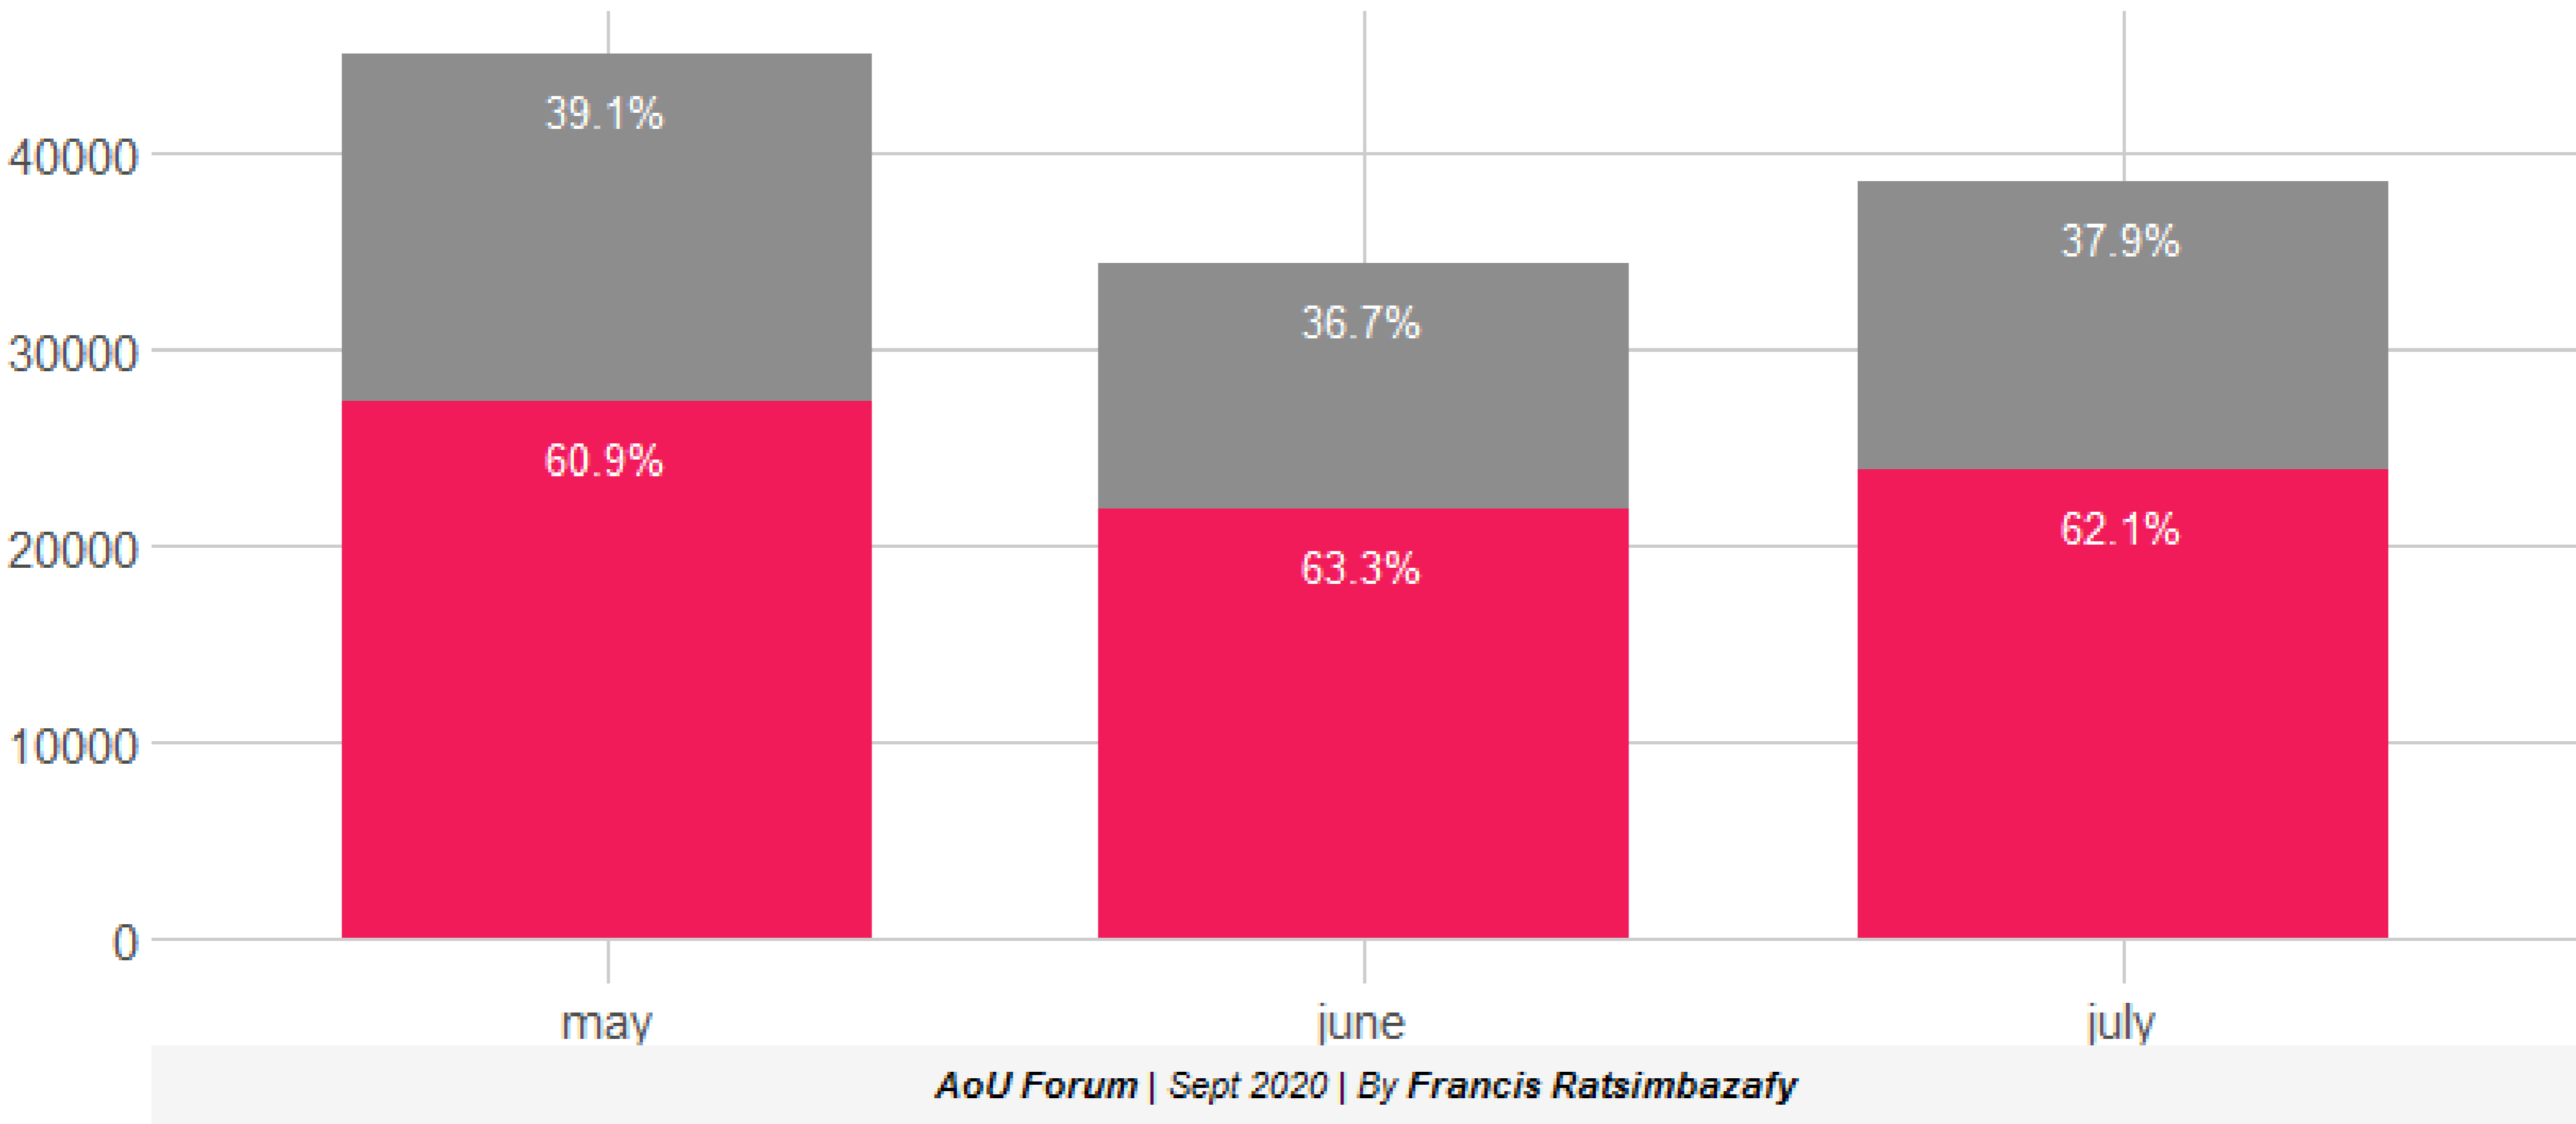

- alcohol use
- electronic nicotine use
- drug use

We focused on information we could not get easily from EHRs and could change in response to COVID-19.

Underrepresented in Biomedical Research (UBR) Completions of COPE

61%-63% of survey takers belong to at least one UBR category...

Share of participants by UBR characteristic

Approximately two thirds of participants who took the COPE survey each month were UBR in at least one category.

Of the COPE Respondents, ~30% endorse anxiety or depression symptoms

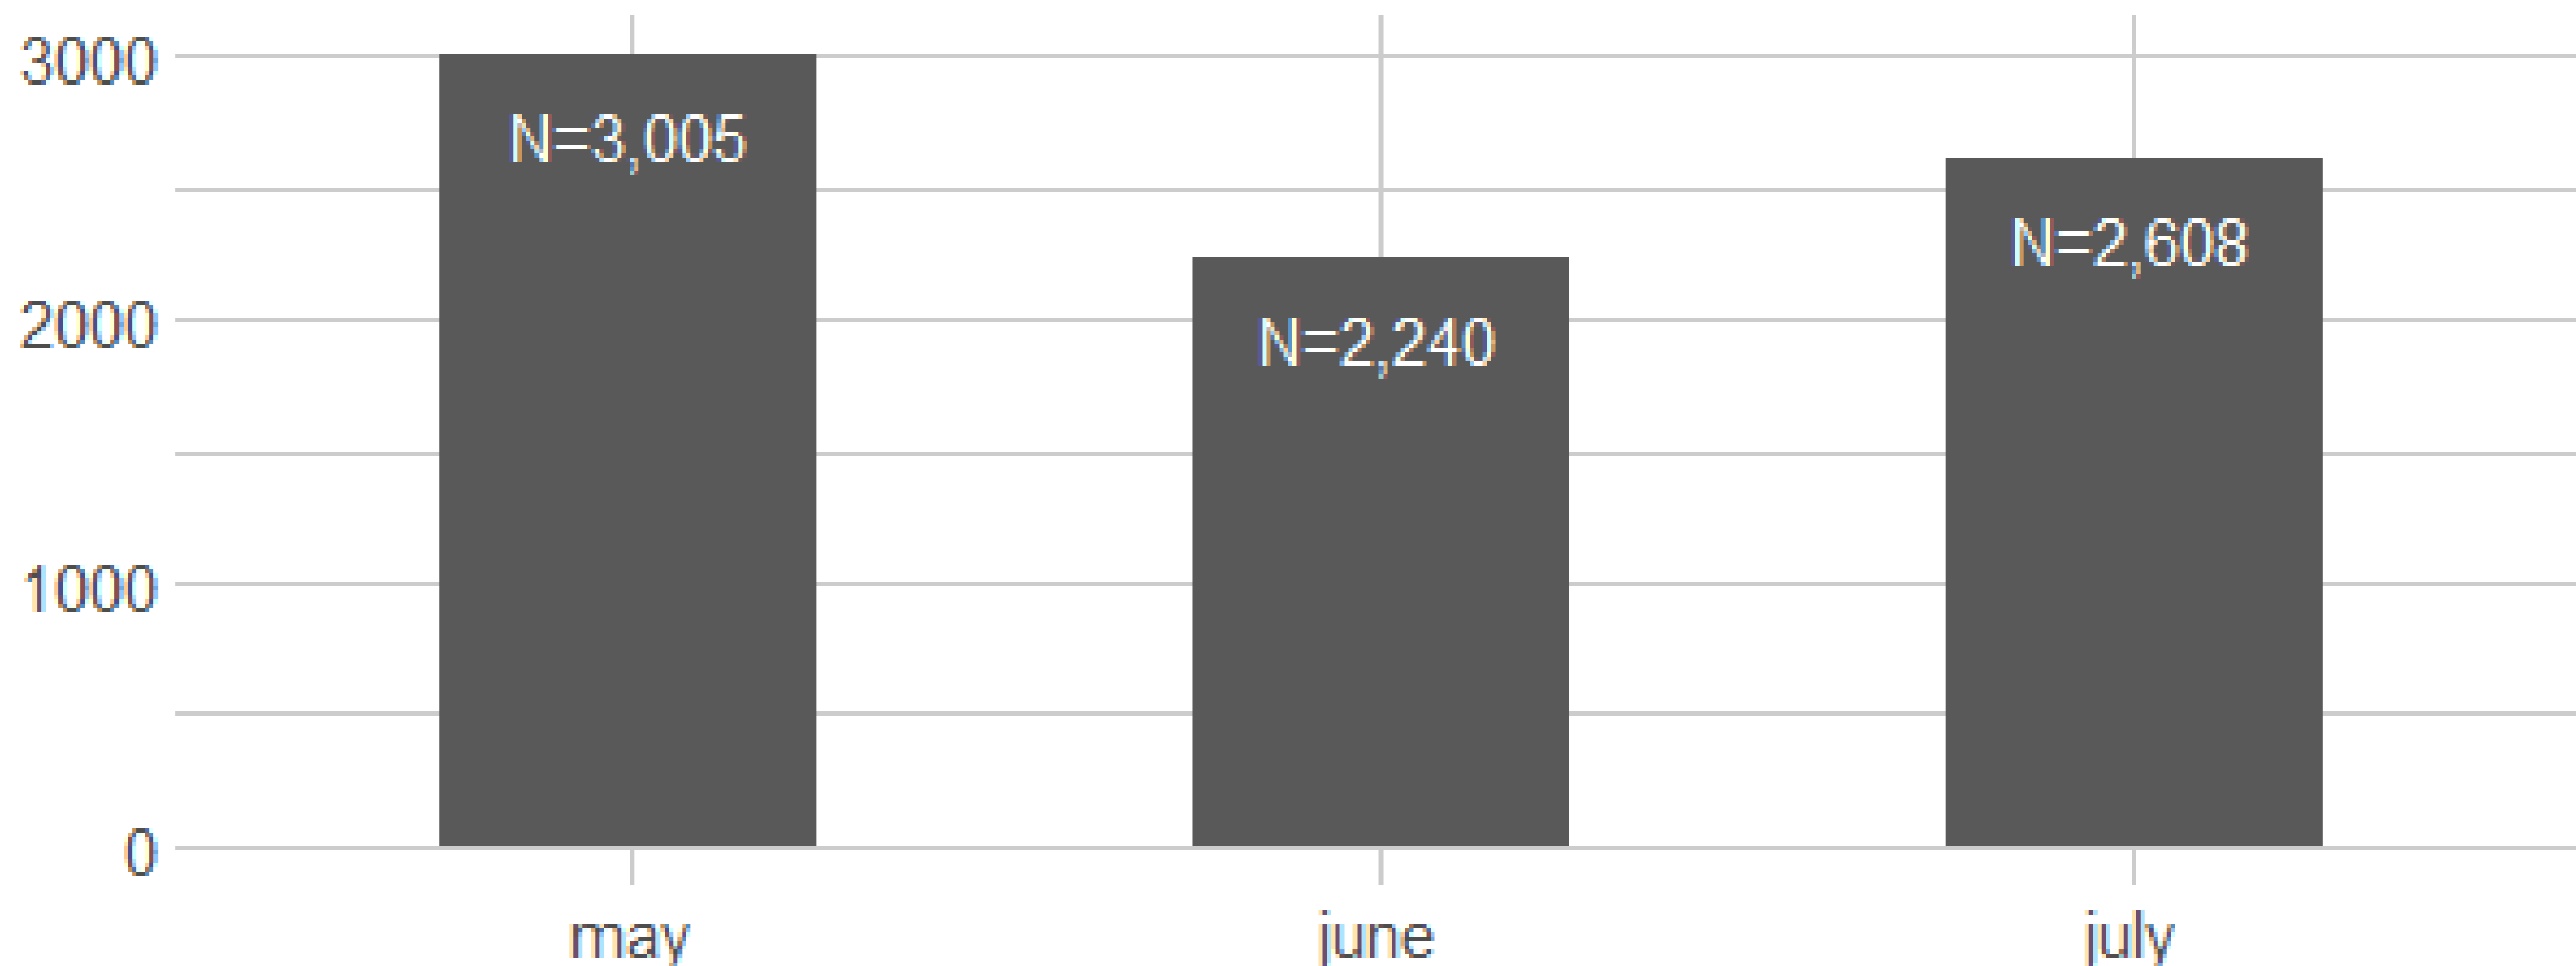

~30% of survey takers endorse severe mental health conditions

Suicide Prevention Message Over Time in COPE

The suicide prevention message **popped up 7% of the time...**

Count of participants with answers other than *Not at all* on *Thoughts being better off dead*
